- Data Structures & Algorithms, Objects & Design, Project Organization & Programming, Object-Oriented Programming, Statistics & Applications, Process & Application Security

Cambridge University

C1 Advanced English Exam

C.A.B.A, Buenos Aires

11/2022

Experience

Freelance

Buenos Aires

Web Pentester

07/2026

- Executed a comprehensive black-box penetration test against a production e-commerce platform, evaluating the storefront, administrative panel, AI WhatsApp bot, and Supabase database.
- Identified 39 security vulnerabilities, including 13 Critical and 8 High severity issues using CVSS 3.1 scoring, and authored a comprehensive technical report detailing prioritized remediation strategies and architectural fixes.
- Exploited severe authentication bypasses and Supabase Row Level Security (RLS) misconfigurations to demonstrate full administrative takeover and unauthenticated exposure of PII for over 300 business prospects.
- Uncovered critical business logic flaws and stored prompt injections, successfully manipulating API discount amounts and poisoning the WhatsApp bot's AI context to alter automated responses.
